How to Read the Sales Dashboard

This dashboard summarizes sales performance by month, region, and product category. Use the slicers to explore a particular period or region.

KPI cards

- **Total Sales** — total sales value for the selected data.
- **Total Profit** — total profit for the selected data. A negative value means the selected orders resulted in a loss.
- **Units Sold** — total quantity sold for the selected data.

The KPI cards update when you select a month or region.

Charts

- **Sales by Month** — compares sales across months. If Year is included, you can distinguish the same month across different years.
- **Sales by Region** — compares sales among regions. Longer bars represent higher sales.
- **Sales by Category** — compares sales among product categories. Taller bars represent higher sales.

Filters

- Choose a month in the **Month** slicer to filter the dashboard.
- Choose a region in the **Region** slicer to filter the dashboard.
- To clear a selection, click the eraser/clear icon on the slicer, if shown.

How to use the dashboard

Start with the KPI cards for the overall result. Then use the charts to see which months, regions, and categories contribute most to sales. Select a month or region to focus the whole dashboard on that selection.
